WORK EXPERIENCE

Product Engineer, Superfone

03/2025 – Present
Bengaluru

- Shipped **AI Receptionist V0 in 1 week** — now handling **10k+ minutes** of live customer calls; layered on test-call flows, knowledge-base ingestion, and agent job/task assignment.
- Built an **AI Sales Agent** with **10+ language** avatars and a **Training Agent** — a WhatsApp-style chat where users feed business context that trains the **shared knowledge base** powering both the Receptionist and Sales Agent.
- Shipped **AI Caller Tunes** to **~80% adoption** in **2 weeks**, a **Payments & Billings** module for AI-agent monetization, and a no-code **chatbot builder** powering **1000+ CRM flows**.
- Revamped legacy dashboard into a **Shadcn UI** system, built internal **backend APIs** to unblock engineering, unified ringing pattern for **100%** of active users, and extended an intern-era pipeline for the next-gen platform launch.

Software Developer Intern, Superfone

12/2024 – 03/2025
Bengaluru

- Built the **end-to-end trial user onboarding pipeline** used in production.
- Integrated OpenAI APIs for automated lead qualification and intelligent workflows.
- **Fixed critical frontend and backend bugs** to improve platform stability.
- Delivered multiple new product features across the web application.
- Upgraded **several existing features to V2**, improving performance and user experience.

Software developer intern, Revibe Engineering

03/2024 – 05/2024
Surat, India

- Optimized load times by **5%** with Next.js **Image Optimization**. Deployed components using **Shadcn UI** and **Firebase**.
- Built **utility products** for the team, streamlining the process of receiving, resolving, and updating issues reported by clients.
- Contributed to **Schema design** for a application, used **Prisma** for Schema.

PROJECTS

Referral Hub, Healthcare Referral Portal (Freelance)

- Shipped a referral platform for a **US-based healthcare firm** serving **3 role-based flows** (Marketers, Intake, Owners) with end-to-end traceability baked into every handoff.
- Built an **internal linking & mapping engine** that stitches referrals across roles — no more "who owns this lead?" back-and-forth across teams.
- Engineered a **custom PDF parser pipeline** that auto-generates mapped intake forms from uploaded documents, cutting manual form-filling to **~0 steps** for the intake team.
- **Stack:** Next.js, TypeScript, Tailwind CSS, Prisma, PostgreSQL

Tracklet 🌐, Personal Finance Tracker

- Built a full-stack money tracker that turns **daily expenses** into **weekly + monthly reports**, because spreadsheets were getting a little too judgmental.
- Wired up **Gmail integration** that auto-parses transaction emails and lets you tag + create categories inline — **1-tap categorization**, no context switches.
- Added **credit + debit card tracking** with live available-balance calculations across **multiple linked cards**, so you always know what's really spendable.
- **Stack:** Next.js, TypeScript, Tailwind, Shadcn UI, Prisma, Neon

More Projects mentioned in portfolio

SKILLS

Languages & Frameworks: C++, Python, HTML, CSS, JavaScript, TypeScript, Node.js, Express.js, ReactJS, Next.js, Tailwind

Cloud/DBs: MongoDB, PostgreSQL, Firebase, AWS

Tools: Vercel, Github Actions, Prisma, Docker, CI/CD

EDUCATION

B Tech - Computer Science Department, *Poornima institute of engineering and technology*
• 8.5 CGPA

2020 – 2024
Jaipur, India
